

If your documents security is important You need Documents Protector to keep it that way

Documents Protector is document security management software that implements discovery, alerting and blocking of restricted words and phrases in documents. The software is tracking write operations on local files and search for the restricted words and phrases in the selected local folders. It helps to secure IT environments from writing confidential and sensitive data to documents and prevent information theft.

Real-time protection

Documents Protector is acting as a server to all protected computers. The software can be installed through the software management console or through any 3rd party deployment system by using the software deployment MSI package. Its powerful engine can protect any number of computers and monitor the protected computers for active document security protection.

Real-time reports

Documents Protector is collecting real-time reports of documents events and configuration changes of the current protected computers. The reports provide logging information about the restricted words and phrases that were found on local documents and also provide optional actions like command executions, mail messages and exporting capabilities.

Real-time options

Documents Protector provides optional software settings that include unstoppable client protection service mode, selectable protected folders and restricted words and phrases, including discovery, alerting and blocking of protected documents and multiple redundant servers.
