

## If analyzing your network events is important You need SYSLOG Center to help you keep it that way

Syslog Center is network management and monitoring software for syslog events that collects messages and notification alerts from any vendor and helps to monitor, analyze, report and correlate real-time network events.

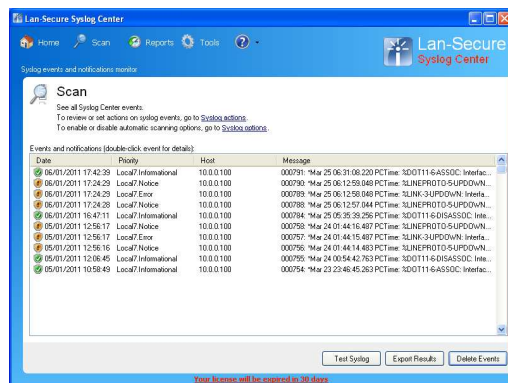

The software can be operated as standard windows application or as windows service that implements server daemon capabilities. The powerful monitoring engine of the software can support any number of syslog events from any network device.

### Real-time events monitoring

Syslog Center software can monitor any number of network devices from any vendor. The software monitoring engine is collecting real-time events including date, priority, host address and textual events messages with optional filtering and exporting capabilities. The software can be operated as standard windows application or as windows service that implements server daemon capabilities.

### Real-time events actions

Syslog Center provides optional automatic actions that will be performed upon receiving specific events from network devices. The selectable automatic actions include E-mail, commands execution and windows event logs.

### Real-time events reporting

Syslog Center provides real-time events reporting using selected correlating options. The software reports include correlation capabilities for root cause analysis events in heavy loaded network environments.

### Syslog Center Key Features

- Real-time windows server syslog daemon for monitoring network events from any vendor as windows program or service.
- Real-time network events root-cause analysis including date, time, priority, host address and text message filtering.
- Real-time network events actions including E-mail, command execution and windows event logs.
- Support any number of network events including automatic events removal options.
- Optional include and exclude filtering options for capturing specific network events from selected sources.
- Optional SQL database and text file exporting capabilities.
- Optional popup events including sound options.

### Syslog Center System requirements

- A 800 MHz or faster processor with at least 256 MB of RAM
- Microsoft Windows XP, Windows 7/Vista™ or 2003/2008 Server
- At least 10 MB of available free space on your hard disk
